

SOUTH AFRICAN RESERVE BANK

1FinSurv

The FinSurv Renewal Programme rebranded to 1FinSurv was initiated to re-engineer the Financial Surveillance Department's (FinSurv) business processes as well as replace a number of key information technology (IT) solutions currently being utilised within the department.

The aim of this technology solution concept is to move away from a complex IT landscape with multiple isolated systems to one cohesive solution that will efficiently cater for all FinSurv's business requirements. The proposed solution will allow FinSurv and reporting entities to log on to a common interface.

The proposed 1FinSurv solution is envisaged to improve the quality and reliability of data processed, making surveillance and supervision more effective. The interface will be more interactive and responsive, thereby improving external stakeholder experience. This concept will also position the SARB for future developments in the financial sector and regulatory environment.

Specific information related to the 1FinSurv programme will be communicated via dedicated industry working groups and stakeholder meetings.

For any enquiries related to 1FinSurv, please contact the Financial Surveillance Department's 1FinSurv team by sending an email to 1FinSurv@resbank.co.za.
